

Monclair Elementary

2004-2005

An Innovative Experiential Summer School Program: \$4,828

In collaboration with three area elementary schools low achieving students will receive intensive instruction in reading and writing through this innovative summer program. All instruction will be based on real life field experiences, as students explore and learn about one aspect of nature each week. Students will pose questions about what they want to learn about nature, research their questions, and write about what they have learned from their research. Use of technology and weekly field trips will enrich the study, as well as serve as attendance motivation.
